Trends and New Advances of IgA Nephropathy

IgA 腎病變的趨勢與新進展

Ming-Tsun Tsai

蔡明村

Division of Nephrology, Taipei Veterans General Hospital

臺北榮民總醫院 腎臟內科

IgA nephropathy is the predominant primary glomerulonephritis worldwide, causing a progressive decline in renal function that can ultimately lead to end-stage kidney disease. Recent studies have revealed new insights into the immunopathogenesis of this condition. Additionally, collaborative efforts across multiple centers have led to several ongoing clinical trials aiming to clarify the exact role and effectiveness of immunotherapy in managing IgA nephropathy. This seminar will explore current management strategies for IgA nephropathy and investigate emerging therapeutic approaches that have the potential to improve the prognosis of affected individuals.

Keyword: IgA nephropathy; immunosuppression; treatment
