Choice of Fluid for Patients with Acute Kidney Injury

Yen-Ta Huang

SICU, Department of Surgery, National Cheng Kung, University Hospital

Some etiologies of Acute kidney injury (AKI) require fluid resuscitation, while certain types of fluid administration are considered to potentially worsen AKI. This presentation will begin with recent clinical practice guidelines regarding AKI and fluid-related recommendations, followed by presenting updated evidences and analyzing the advantages and disadvantages of these results. The speaker will also analyze the mechanisms of nephrotoxicity caused by various fluid administrations through others' and personal basic medical experiments.
